- MO WIC Satellite Offices
- MO Long Term Care Facilities
- MO Licensed Pharmacies
- MO Local Public Health Agency Districts
- MO Local Public Health Agencies
- MO Hospitals
- MO Federally Qualified Health Centers

MSDIS General News

We're back in the classroom! As of January 2023, we are once again teaching a new generation of Mizzou undergraduates who are all in the same room as one another! We are very happy to return to teaching GEOG 1800 and are already very impressed by some of the students we have. This course has been through several major transformations over the years, and this one is no different. While we initially planned to stick to the original intent of the course as a high-level overview of all things geospatial tech, we are trying to use this semester to give students some idea of what circumstances and challenges they can expect in the professional GIS environment so they are ready to go to work (for you guys) as soon as they leave Mizzou.

As for MSDIS news, in no particular order, we have recently published the following image services:

[2022/2023 Mid-America Regional Counsel](#)

[2022 NAIP](#)

[2020 St Louis Imagery Consortium](#)

We are still working on adding the 2022/2023 MARC imagery to the 2022/2023 Statewide service.

MSDIS Downtime

No outages were reported during January 2023, however there was a brief hiccup towards the end of the month. Some services continued running just fine, others did not respond at all. I initially believed this to be an issue with the MSDIS storage space and restarted the server, which seemed to resolve the problem. Shortly after, however, I received a campus IT alert indicating that there were network failover problems experience at around the same time, which leads me to suspect that the problem was not unique to MSDIS.

MSDIS January 2023 Server Stats

Still looking for a Sawmill replacement to crunch our server numbers. Please stand by...
